EDUCATION

AMIKOM PURWOKERTO UNIVERSITY
Bachelor's Degree in Computer Science (Informatics)

SMK TELKOM PURWOKERTO
Vocational High School Diploma in Software Engineering

TECHNICAL SKILLS

→ Flutter (Dart)
→ Ionic (Angular, Capacitor)
→ TypeScript, JavaScript
→ PHP (Framework & Native)
→ Web Application Development
→ Web Development
→ Git

CERTIFICATION

GOOGLE ADVANCED DATA ANALYTICS
Coursera - 2025

TELKOM COMPETENCY CERTIFICATION
Telkom Indonesia - 2014

ABOUT ME

I enjoy solving complex computational challenges by developing efficient, simple, and client-friendly solutions. My focus is on crafting clear, maintainable code while ensuring the best experience for users and clients alike.

WORK EXPERIENCE

SENIOR SOFTWARE DEVELOPER
PT. Incore Systems Solutions (2024-Present)

As a Senior Developer, I worked on designing and building cross-platform mobile applications using Ionic, Angular, and Capacitor.js. I collaborated with designers, backend engineers, and stakeholders to deliver reliable applications with smooth user experiences and well-integrated APIs.
My responsibilities included developing and maintaining hybrid mobile apps, improving performance across devices, reviewing code, and supporting junior developers. I also took part in sprint planning, feature discussions, and integrated third-party services, Firebase, and native device features to meet business requirements and delivery timelines.

MOBILE APPLICATIONS DEVELOPER
PT. Incore Systems Solutions (2020-2024)

I am a mobile application developer with experience using hybrid frameworks such as Ionic, Angular, and Capacitor.js. I have worked on web and mobile projects, focusing on building reliable and efficient applications. I handle development end-to-end, including user interface implementation, API integration, and performance optimization, while ensuring solutions meet both business objectives and user needs.

SOFTWARE DEVELOPER
Java Multi Mandiri (2019-2020)

As a Software Developer and team lead, I guided the team toward delivery goals and made key technology decisions. I selected Laravel for the backend and Angular, Tailwind CSS, and Electron for the frontend and desktop application. We built Clickoding.id – Stockraken, an omnichannel platform that automates stock synchronization between internal systems and Indonesian marketplaces.
